Environmental Policy

Rebound Technology Group recognizes its responsibilities towards the environment and seeks to ensure that whilst its impact within the market place is maximized, its impact on the world in which we live is minimal.

We are committed to the prevention of pollution and to ensuring that our processes are conducted in accordance with the relevant environmental legislation.

In addition to our legal responsibilities, we seek to minimize our impact upon the environment by reducing energy consumption, minimizing waste and promoting recycling.

In order to assess our success in implementing these environmental protection measures and to ensure our continual improvement in these areas, we have set objectives which are monitored and reviewed.

To assist in achieving our environmental objectives, we are developing and implementing a documented Environmental Management System to meet the requirements of ISO 14001: 2004.

This policy has been communicated to all employees of the Rebound Technology Group as well as those working on its behalf and is available to the public upon request.
