

Rebound Electronics

COUNTERFEIT POLICY STATEMENT

Rebound Electronics recognises that counterfeit components pose a serious threat to the electronics industry and its end customers.

We have devised comprehensive internal procedures to provide genuine products and fulfil our customer expectations.

When components cannot be obtained from traceable sources, Rebound Electronics will endeavour to use verified suppliers or take mitigation actions (e.g. testing) to minimise the risk of fraudulent components entering the supply chain.

To verify vendor quality, we monitor the ongoing performance of all suppliers utilising a variety of criteria. Our warehouse procedures include rigorous inspection levels depending on the supplier classification. All products that enter the warehouse have full photographic traceability.

Our internal procedures include monitoring of counterfeit reports, inspection processes to detect suspect parts (IDEA-STD-1010-B), quarantine and reporting of counterfeit parts to external sources where appropriate.
